ESC/POS Command Manual

1. Control Command summary

No.	Command	Function	
1	HT	Horizontal tab	
2	LF	Print and line feed	
3	CR	Print and carriage return	
4	FF	Print end position label to start printing	
5	CAN	Cancel print data in page mode	
6	DLE EOT	Real-time status transmission	
7	DLE ENQ	Real-time request to printer	
8	ESC FF	Print data in page mode	
9	ESC SP	Set character right-side spacing	
10	ESC !	Set print mode	
11	ESC $	Set absolute print position	
12	ESC %	Select/cancel user-defined character set	
13	ESC &	Define user-defined characters	
14	ESC *	Set bit image mode	
15	ESC -	Turn underline mode on/off	
16	ESC 2	Set 1/6 inch line spacing	
17	ESC 3	Set line spacing using minimum units	
18	ESC ?	Cancel user-defined characters	
19	ESC @	Initialize printer	
20	ESC D	Set horizontal tab positions	
21	ESC E	Select emphasized mode	
22	ESC G	Select double-strike mode	
23	ESC J	Print end feed paper using minimum units	
24	ESC L	Select page mode	
25	ESC M	Select character font	
26	ESC R	Select international character set	
27	ESC S	Select standard mode	
28	ESC T	Select print direction in page mode	
29	ESC V	Set/cancel 90° cw rotated character	
30	ESC W	Set printing area in page mode	
31	ESC \	Set relative position	
32	ESC a	Align position	
33	ESC d	Print and feed paper n lines	
34	ESC t	Select character code table	
35	ESC {	Set/cancel upside-down character printing	
36	FS p	Print NV bit image	
37	FS q	Define NV bit image	
38	GS !	Select character size	
39	GS $	Set absolute vertical print position in page mode	
40	GS *	Define downloaded bit image	
41	GS /	Print down-loaded bit image	
42	GS B	Turn white/black reverse printing mode on/off	
43	GS H	Select printing position of HRI characters	
44	GS I	Transmit printer ID	
45	GS L	Set left margin	
46	GS W	Set printing area width	
47	GS \	Set relative vertical print position in page mode	
48	GS a	Enable/disable Automatic Status Back(ASB)	
49	GS f	Select font for HRI characters	

50	GS h	Set bar code height	
51	GS k	Print bar code	
52	GS r	Transmit status	
53	GS v 0	Print raster bit image	
54	GS w	Set bar code width	

2. Command Descriptions

Command Descriptions

Command Notation

[Name]   The name of the control command.

[Format]   The code sequence.
  In this description, < > H denotes hexadecimal numbers, < >denotes
  decimal numbers and < > B denotes binary numbers.
  [ ] k indicates the contents of the [ ] should be repeated k times.

[Range]   The allowable range for the arguments.

[Description]   Description of the command function.

[Details]   If necessary provides important information on setting and using the printer command.

[Default]   The default values for the commands.

[Reference]   List related commands.

[Example] Example of using the commands.

The numbers denoted by <>H is hexadecimal.
The numbers denoted by <>B is binary.

3. Print Commands

The LK-Px series supports the following commands for printing characters and advancing paper.

HT
[Name]	Horizontal tab

[Format]   ASCII   HT
             Hex   09
             Decimal   9

[Description]   Moves the print position to the next tab position.

[Details]   ·This command is ignored unless the next tab position has been set.
             ·If the next horizontal tab position exceeds the printing area, the printer
               sets the printing position to [Printing area width + 1].
             ·Horizontal tab positions are set using "**ESC D**".
             ·If this command is received when the printing position is at [printing area width +1], the printer
               executes print buffer-full printing of the current line and horizontal tab processing from the
               beginning of the next line.
             ·The default setting of the horizontal tab position for the paper roll is font A
               (12 x 24) every 8th character (9th, 17th, 25th, ... column).

[Reference]   **ESC D**

LF
[Name]	Print and line feed

[Format]   ASCII   LF
             Hex   0A
             Decimal   10

[Description]   ·Prints the data in the print buffer and feeds one line based on the current
                  line spacing.

[Details]   ·This command sets the print position to the beginning of the line.

[Reference]   **ESC 2, ESC 3**

CR
[Name]	Print and carriage return.

[Format]   ASCII   CR
             Hex   0D
             Decimal   13

[Description]   When automatic line feed is enabled, this command functions the same as LF; when automatic
                 line feed is disabled, this command is ignored.

[Details]   ·Sets the print starting position to the beginning of the line.
                   ·The automatic line feed is ignored.

[Reference]   **LF**

FF

[Name]   Print and return to standard mode in page mode.

[Format]

ASCII	FF
Hex	0C
Decimal	12

[Description]   Prints the data in the print buffer and returns to standard mode.

[Details]   ·The buffer data is deleted after being printed.
                   ·The printing area set by **ESC W** is reset to the default setting.
                   ·The printer does not execute paper cutting.
                   ·This command sets the print position to the beginning of the line.
                   ·This command is enabled only in page mode.

[Reference]   **ESC FF, ESC L, ESC S**

CAN

[Name]   Cancel print data in page mode

[Format]

ASCII	CAN
Hex	18
Decimal	24

[Description]   In page mode, delete all the print data in the current printable area.

[Details]   ·This command is enabled only in page mode.
                   ·If data that existed in the previously specified printable area also exists in
                    the currently specified printable area, it is deleted.

[Reference]   **ESC L, ESC W**

DLE EOT *n*

[Name]   Real-time status transmission.

[Format]

ASCII	DLE	EOT	*n*
Hex	10	04	*n*
Decimal	16	4	*n*

[Range]   1≤n≤4

[Description]   Transmits the selected printer status specified by n in real-time,
                   according to the following parameters:
                      n=1 : Transmit printer status

> n=2 : Transmit off-line status
> n=3 : Transmit error status
> n=4 : Transmit paper roll sensor status

[Details]   ·The printer transmits the current status. Each status is represented by one-byte data.
·The printer transmits the status without confirming whether the host computer can receive data.
·The printer executes this command upon receiving it.
·This command is executed even when the printer is offline, the receive buffer is full,
 or there is an error status.
·When Auto Status Back (ASB) is enabled using the **GS** a command, the status transmitted by the
 DLE EOT command and the ASB status must be differentiated.

[Notes]   ·The status is transmitted whenever the data sequence of <10>H<04>H<n> (1≤n≤4) is received.

Example :
In **ESC** * *m nL nH d1...dk*   d1=<10>H, d2=<04>H, d3=<01>H

·This command should not be used within the data sequence of another command that consists
 of 2 or more bytes.

Example :
If you attempt to transmit **ESC 3** *n* to the printer, but DTR (DSR for the host computer)
goes to MARK before *n* is transmitted and then **DLE EOT 3** interrupts before *n* is
received, the code <10> H for **DLE EOT 3** is processed as the code for **ESC 3** <10>H.

n = 1: Printer status

Bit	Off/On	Hex	Decimal	Function
0	Off	00	0	Not used. Fixed to Off
1	On	02	2	Not used. Fixed to On
2	Off	00	0	
	On	04	4	
3	Off	00	0	On-line
	On	08	8	Off-line.
4	On	10	16	Not used. Fixed to On
5,6	-	-	-	Undefined.
7	Off	00	0	Not used. Fixed to Off.

n = 2: Off-line status

Bit	Off/On	Hex	Decimal	Function
0	Off	00	0	Not used. Fixed to Off
1	On	02	2	Not used. Fixed to On
2	Off	00	0	Cover is closed
	On	04	4	Cover is open
3	Off	00	0	Paper is not being fed by using the FEED button
	On	08	8	Paper is being fed by the FEED button
4	On	10	16	Not used. Fixed to On
5	Off	00	0	No paper-end stop
	On	20	32	Printing is being stopped
6	Off	00	0	No error
	On	40	64	Error occurs
7	Off	00	0	Not used. Fixed to Off

Bit 5: Becomes on when the paper end sensor detects paper end and printing stops.

n = 3: Error status

Bit	Off/On	Hex	Decimal	Function
0	Off	00	0	Not used. Fixed to Off
1	On	02	2	Not used. Fixed to On
2	-	-	-	Undefined
3	Off	00	0	
	On	08	8	
4	On	10	16	Not used. Fixed to On
5	Off	00	0	No unrecoverable error
	On	20	32	Unrecoverable error occurs
6	Off	00	0	No auto-recoverable error
	On	40	64	Auto recoverable error occurs
7	Off	00	0	Not used. Fixed to Off

Bit 3: If these errors occur due to paper jams or the like, it is possible to recover by correcting the cause of the error and executing **DLE ENQ n** (1 ≤ n ≤ 2). If an error due to a circuit failure (e.g. wire break) occurs, it is impossible to recover.

Bit 6: When printing is stopped due to high print head temperature until the print head temperature drops sufficiently or when the paper roll cover is open during printing, bit 6 is On.

n = 4: Continuous paper sensor status

Bit	Off/On	Hex	Decimal	Function
0	Off	00	0	Not used. Fixed to Off
1	On	02	2	Not used. Fixed to On
2,3	Off	00	0	Paper roll sensor: paper adequate
	On	0C	12	Paper roll end detected by the paper roll sensor.
4	On	10	16	Not used. Fixed to On
5,6	Off	00	0	Paper roll sensor: Paper present
	On	60	96	Paper roll end detected by the paper roll sensor
7	Off	00	0	Not used. Fixed to Off

[Reference]   **DLE ENQ, GS a, GS r**

DLE ENQ n

[Name]   Real-time request to printer

[Format]   ASCII   DLE   ENQ   n
                    Hex   10   05   n
                    Decimal   16   5   n

[Range]   1≤n≤2

[Description]   Responds to a request from the host computer.
                    n specifies the requests as follows:

n	Request
1	Recover from an error and restart printing from the line where the error occurred
2	Recover from an error aft clearing the receive and print buffers

[Details]
·This command is effective only when an auto-cutter error occurs.
·The printer starts processing data upon receiving this command.
·This command is executed even when the printer is offline, the receive buffer is full, or there is an error status with a serial interface model.

·The status is also transmitted whenever the data sequence of <10>H<05>H< n> (1≤n≤2) is received.

Example:

In **ESC * ** * m nL nH d**k, d1 = <10>H, d2 = <05>H, d3 = <01>H

·This command should not be contained within another command that consists of two or more bytes.

Example:

If you attempt to transmit **ESC 3 n** to the printer, but DTR (DSR for the host computer) goes to MARK before n is transmitted, and **DLE ENQ 2** interrupts before n is received, the code <10>H for **DLE ENQ 2** is processed as the code for **ESC 3** <10>H.

[Reference]　　　　**DLE EOT**

ESC FF

[Name]　　　　Print data in page mode

[Format]

ASCII	ESC	FF
Hex	1B	0C
Decimal	27	12

[Description]　　　　In page mode, prints all buffered data in the printable area collectively.

[Details]　　　　·This command is enabled only in page mode.

·After printing, the printer does not clear the buffered data, setting value for **ESC T** and **ESC W**, and the position for buffering character data.

[Reference]　　　　**FF, ESC L, ESC S**

ESC SP *n*

[Name]　　　　Set right-side character spacing

[Format]

ASCII	ESC	SP	*n*
Hex	1B	20	*n*
Decimal	27	32	*n*

[Range]　　　　$0 \leq n \leq 255$

[Description]　　　　Sets the character spacing for the right side of the character to

[*n* x horizontal or vertical motion units].

[Details]　　　　·The right-side character spacing for double-width mode is twice the normal value.

When characters are enlarged, the right-side character spacing is *n* times normal value.

·This command does not affect the setting of Kanji characters.

·This command sets values independently in each mode (standard and page modes).

·In standard mode, the horizontal motion unit is used.

·In page mode, the horizontal or vertical motion unit differs in page mode, depending on starting position of the printable area as follows:

①When the starting position is set to the upper left or lower right of the printable area using **ESC T,** the horizontal motion unit (x) is used.

②When the starting position is set to the upper right or lower left of the printable area using **ESC T,** the vertical motion unit (y) is used.

·The maximum right-side spacing is 35.983 mm {255/180"}. Any setting exceeding the maximum is converted to the maximum automatically.

[Default] $n = 0$

[Reference]

ESC ! n

[Name]   Select print mode(s)

[Format]
ASCII	ESC	!	n
Hex	1B	21	n
Decimal	27	33	n

[Range] $0 \leq n \leq 255$

[Description]   Selects print mode(s) using n as follows:

Bit	Off/On	Hex	Decimal	Function
0	Off	00	0	Character font A (12x24)
	On	01	1	Character font B (9x17)
1	-	-	-	Undefined.
2	-	-	-	Undefined.
3	Off	00	0	Emphasized mode not selected.
	On	08	8	Emphasized mode selected.
4	Off	00	0	Double-height mode not selected.
	On	10	16	Double-height mode selected.
5	Off	00	0	Double-width mode not selected.
	On	20	32	Double-width mode selected.
6	-	-	-	Undefined.
7	Off	00	0	Underline mode not selected.
	On	80	128	Underline mode selected.

[Details]   ·When both double-height and double-width modes are selected, quadruple size characters are printed.

·The printer can underline all characters, but can not underline the space set by **HT** or 90° clockwise rotated characters.

·The thickness of the underline is selected by **ESC-,** regardless of the character size.

·When some characters in a line are double or more height, all the characters on the line are aligned at the baseline.

·**ESC E** Can also turn on or off emphasized mode. However, the setting of the last received command is effective.

·**ESC -** Can also turn on or off underline mode. However, the setting of the last received command effective.

·**GS !** Can also select character size, However, the setting of the last received command is effective.

·Emphasized mode is effective for alphanumeric and Kanji. All print modes except emphasized mode is effective only for alphanumeric.

[Default] $n = 0$

[Reference]   **ESC E, ESC -, GS !**

ESC $ *nL nH*

[Name]   Set absolute print position

[Format]

ASCII	ESC	$	*nL*	*nH*
Hex	1B	24	*nL*	*nH*
Decimal	27	36	*nL*	*nH*

[Range] $0 \leq nL \leq 255$
                   $0 \leq nH \leq 255$

[Description]   Sets the distance from the beginning of the line to the position at which subsequent characters are to be printed.

[Details]   ·The distance from the beginning of the line to the print position is
                   $[(nL + nH \times 256) \times$ (vertical or horizontal motion unit)] inches.
                   ·Settings outside the specified printable area are ignored.
                   ·In page mode, the horizontal or vertical motion unit differs depending on the starting position of the printable area as follows :
                      1. When the starting position is set to the upper left or lower right of the printable area using **ESC T,** the horizontal motion unit (x) is used.
                      2. When the starting position is set to the upper right or lower left of the printable area using **ESC T,** the vertical motion unit (y) is used.

[Reference]   **ESC** \ **, GS $, GS** \

ESC % n

[Name]   Select/cancel user-defined character set

[Format]

ASCII	ESC	%	*n*
Hex	1B	25	*n*
Decimal	27	37	*n*

[Range] $0 \leq n \leq 255$

[Description]   Selects or cancels the user-defined character set
                   ·When the LSB of n is 0, the user-defined character set is canceled.
                   ·When the LSB of n is 1, the user-defined character set is selected.

[Details] ·When the user-defined character set is canceled,
  the internal character set is automatically selected.
 ·n is available only for the least significant bit.

[Default] n = 0
[Reference] **ESC &, ESC ?**

ESC & y c1 c2 [x1 d1…d(y × x1)]..[xk d1..d(y × xk)]

[Name] Define user-defined characters

[Format]

	ASCII	ESC	&	y	c1	c2 *[x1 d1…d(y×x1)]…[xk d1…d(y×xk)]*
	Hex	1B	26	y	c1	c2 *[x1 d1…d(y×x1)]…[xk d1…d(y×xk)]*
	Decimal	27	38	y	c1	c2 *[x1 d1…d(y×x1)]…[xk d1…d(y×xk)]*

[Range] y = 3
 $32 \leq c1 \leq c2 \leq 126$
 $0 \leq x \leq 12$ Font A (when font A (12 x 24) is selected)
 $0 \leq x \leq 9$ Font B (when font B (9 x 17) is selected)
 $0 \leq d1 … d(y \text{x} xk) \leq 255$

[Description] Defines user-defined characters
 ·y specifies the number of bytes in the vertical direction.
 ·c1 specifies the beginning character code for the definition, and c2 specifies the final code.
 ·X specifies the number of dots in the horizontal direction.

[Details] ·The allowable character code range is from ASCII code <20>H to <7E>(95characters).
 ·It is possible to define multiple characters for consecutive character codes.
 ·If only one character is desired, use c1 = c2.
 ·d is the dot data for the characters. The dot pattern is in the horizontal direction from the left side.
  Any remaining dots on the right side are blank.
 ·The data to define a user-defined character is (y × x) bytes.
 ·Set a corresponding bit to 1 to print a dot or 0 to not print a dot.
 ·This command can define different user-defined character patterns by each fonts. To select a font, use **ESC !**
 ·A user-defined character and a downloaded bit image cannot be defined simultaneously.
  When this command is executed, the downloaded bit image is cleared.
 ·The user-defined character definition is cleared when:
  ① **ESC @** is executed.
  ② **ESC ?** is executed.
  ③ **FS q** is executed.
  ④ **GS *** is executed.
  ⑤ The printer is reset or the power is turned off.
 ·When the user-defined characters are defined in font B (9 x 24), only the most significant bit of the 3rd byte of data in vertical direction is effective.
[Default] The internal character set
[Reference] **ESC %, ESC ?**
[Example]

• When font A (12 × 24) is selected.

d1= <0F>H   d4 = <30>H   d7 = <40>H . . . .
d2 = <03>H   d5 = <80>H   d8 = <40>H . . . .
d3 = <00>H   d6 = <00>H   d9 = <20>H . . . .

d1 = <1F>H   d4 = <08>H   d7 = <10>H...
d2 = <FF>H   d5 = <08>H   d8 = <04>H...
d3 = <00>H   d6 = <08>H   d9 = <08>H...

ESC * m nL nH [d1...dk]

[Name]	Select bit-image mode

[Format]	ASCII	ESC	*	m	nL	nH	d1...dk

	Hex	1B	2A	*m*	*nL*	*nH*	*d1...dk*
	Decimal	27	42	*m*	*nL*	*nH*	*d1...dk*

[Range]   *m* =0, 1, 32, 33
$0 \le nL \le 255$
$0 \le nH \le 3$
$0 \le d \le 255$

[Description]   Selects a bit-image mode using *m* for the number of dots specified by *nL* and *nH*, as follows:

| *m*	Mode	Vertical	Direction	Horizontal	Direction
		NO. of Dots	Dot Density	Dot Density	Number of (Data(K)
0	8-dot single-density	8	60 DPI	90 DPI	*nL + nH* x *256*
1	8-dot double-density	8	60 DPI	180 DPI	*nL + nH* x *256*
32	24-dot single-density	24	180 DPI	90 DPI	*(nL + nH x 256)* x *3*
33	24-dot double-density	24	180 DPI	180 DPI	*(nL + nH x 256)* x *3*

[dpi : dots per 25.4 mm{1"}]

[Details]   ·If the values of m is out of the specified range,
    nL and data following are processed as normal data.
·The *nL* and *nH* indicate the number of dots of the bit image in the horizontal direction.
    The number of dots is calculated *by nL + nH x 256*.
·If the bit-image data input exceeds the number of dots to be printed on a line,
    the excess data is ignored.
·*d* indicates the bit-image data. Set a corresponding bit of 1 to print a dot or to 0 to not print a dot.
·If the width of the printing area set by **GS L** and **GS W** less than the width required by the data
    sent with the **ESC** * command the following will be performed on the line in question (but the
    printing cannot exceed the maximum printable area) :
        ① The width of the printing area is extended to the right to accommodate the amount of
            data.
        ② If step ① does not provide sufficient width for the data,
            the left margin is reduced to accommodate the data.
·After printing a bit image, the printer returns to normal data processing mode.
·This command is not affected by print modes(emphasized, double-strike, underline,
    character size or white/black reverse printing), except upside-down printing mode.
·Refer to Figure 3.12.3 for the bit image development position in page mode.
·The relationship between the image data and the dots to be printed is as follows:
·When 8-dot bit image is selected:
ESC - *n*

[Name]   Turn underline mode on/off

[Format]	ASCII	ESC	-	*n*
	Hex	1B	2D	*n*
	Decimal	27	45	*n*

[Range]   0≤*n*≤2,   48≤*n*≤50

[Description]   Turns underline mode on or off, based on the following values of *n*.

n	Function
0, 48	Turns off underline mode
1, 49	Turns on underline mode (1-dot thick)
2, 50	Turns on underline mode (2-dots thick)

[Details]   ·The printer can underline all characters (including right-side character spacing), but cannot underline the space set by **HT**.
·The printer cannot underline 90˚ clockwise rotated characters and white/black inverted characters.
·When underline mode id turned off by setting the value of *n* to 0 or 48, the following data is not underlined, and the underline thickness set before the mode is turned off does not change. The default underline thickness is 1 dot.
·Changing the character size does not affect the current underline thickness.
·Underline mode can also be turned on or off by using **ESC**!. Note, however, that the last received command is effective.
·This command does not affect Kanji printing.

[Default]   *n* = 0

[Reference]   **ESC !**

ESC 2

[Name]   Select default line spacing

[Format]	ASCII	ESC	2
	Hex	1B	32
	Decimal	27	50

[Description]   Selects approximately 4.23 mm {1/6"} spacing.

[Details]   ·The line spacing can be set independently in standard mode and in page mode.

[Reference]   **ESC 3**

ESC 3 *n*

[Name]   Set line spacing

[Format]	ASCII	ESC	3	*n*
	Hex	1B	33	*n*
	Decimal	27	51	*n*

[Range]   0≤*n*≤255

[Description]   Sets the line spacing to [*n* x (vertical or horizontal motion unit)] inches.

[Details]   ·The line spacing can be set independently in standard mode and in page mode.

·In standard mode, the vertical motions until (y) is used.

·In page mode, this command function as follows,

   depending on the starting position of the printable area :

①When the starting position is set to the upper left or lower right to the printable area using **ESC T**, the vertical motion unit *(y)* is used.

②When the starting position is set to the upper right or lower left of the printable area using **ESC T**, the horizontal motion unit *(x)* is used.

·The maximum paper feed amount is 1016 mm {40"}. Even if a paper feed amount of more than 1016 mm{40"}is set, the printer feeds the paper only 1016 mm{40"}

[Default]   Line space is equivalent to approximately 4.23 mm{1/6"}.

[Reference]   **ESC 2**

ESC ? n

[Name]   Cancel user-defined characters

[Format]

ASCII	ESC	?	*n*
Hex	1B	3F	*n*
Decimal	27	63	*n*

[Range] $32 \leq n \leq 126$

[Description]   Cancels user-defined characters.

[Details]   ·This command cancels the pattern defined for the character code specified by n. After the user-defined characters is canceled, the corresponding pattern for the internal character is printed.

·This command deletes the pattern defined for the specified code in the font selected by **ESC !**.

·If a user-defined character has not been defined for the specified character code, the printer ignores this command.

[Reference]   **ESC &**, **ESC %**

ESC @

[Name]   Initialize printer

[Format]

ASCII	ESC	@
Hex	1B	40
Decimal	27	64

[Description]   Clears the data in the print buffer and resets the printer mode to the mode
          that was in effect when the power was turned on.

[Details]   ·The DIP switch settings are not checked again.
        ·The data in the receive buffer is not cleared.
        ·The macro definition is not cleared.
        ·The NV bit image data is not cleared.
        ·The data of the NV user memory is not cleared.

ESC D [$n1...nk$] NUL

[Name]   Set horizontal tab positions

[Format]

ASCII	ESC	D	$n1......nk$	NUL
Hex	1B	44	$n1......nk$	00
Decimal	27	68	$n1......nk$	0

[Range] $1 \leq n \leq 255$
          $0 \leq k \leq 32$

[Description]   Set is horizontal tab positions.
        ·n specifies the column number for setting a horizontal tab position from the beginning of the line.
        ·k indicates the total number of horizontal tab positions to be set.

[Details]   ·The horizontal tab position is stored as a value of [character width x n]
          measured from the beginning of the line. The character width includes the right-side character
          spacing, and double-width characters are set with twice the width of normal characters.
        ·This command cancels the previous horizontal tab settings.
        ·When setting $n = 8$, the print position is moved to column 9 by sending **HT.**
        ·Up to 32 tab positions ($k=32$) can be set. Data exceeding 32-tab positions s is processed as
          normal data.
        ·Transmit [n]k in ascending order and place a **NUL** code 0 at the end.
        ·When [n]k is less than or equal to the preceding value [n]k-1, tab setting is finished and the
          following data is processed as normal data,
        ESC D NUL cancels all horizontal tab positions.
        ·The previously specified horizontal tab positions do not change, even if the character width
          changes.
        ·The character width is memorized for each standard and page mode.

| [Default] | The default tab positions are at intervals of 8 characters (columns 9, 17, 25, …) for the font A (12 X 24). |

[Reference]   HT

ESC E *n*

[Name]   Turn emphasized mode on/off

[Format]

ASCII	ESC	E	*n*
Hex	1B	45	*n*
Decimal	27	69	*n*

[Range] $0 \leq n \leq 255$

[Description]   Turns emphasized mode on or off.
·When the LSB of *n* is 0, emphasized mode is turned off.
·When the LSB of *n* is 1, emphasized mode is turned on.

[Details]   ·Only the least significant bit of *n* is enabled.
·This command and **ESC!** Turn on and off emphasized mode in the same way. Be careful when this command is used with **ESC!.**

[Default]   *n* = 0

[Reference]   **ESC !**

ESC G *n*

[Name]   Turn on/off double-strike mode

[Format]

ASCII	ESC	G	*n*
Hex	1B	47	*n*
Decimal	27	71	*n*

[Range] $0 \leq n \leq 255$
[Description]   Turns double-strike mode on or off.
·When the LSB of *n* is 0, double-strike mode is turned off.
·When the LSB of *n* is1, double-strike mode is turned on.

[Details]   ·Only the lowest bit of *n* is enabled.
·Printer output is the same in double-strike mode and in emphasized mode.

[Default]   *n* = 0

[Reference]   **ESC E**

ESC J *n*

[Name]   Print and feed paper

[Format]

ASCII	ESC	J	n
Hex	1B	4A	n
Decimal	27	74	n

[Range] $0 \leq n \leq 255$

[Description]   Prints the data in the print buffer and feeds the paper [n x vertical or horizontal motion unit].

[Details]   ·After printing is completed, this command sets the print starting position
             to the beginning of the line.
·The paper feed amount set by this command does not affect the values set by **ESC 2** or **ESC 3.**
·In standard mode, the printer uses the vertical motion unit(y).
·In page mode, this command functions as follows, depending on the starting position of the
      printable area.
      ①When the starting position is set to the upper left or lower right of the printable area using
        ESC T, the vertical motion unit (y) is used.
      ②When the starting position is set to the upper right or lower left of the printable area using
        ESC T, the horizontal motion unit (x) is used.

·The maximum line spacing is 1016 mm{40"}. When the setting value exceeds the maximum, it is
      converted to the maximum automatically.

[Reference]

ESC L

[Name]   Select page mode

[Format]

ASCII	ESC	L
Hex	1B	4C
Decimal	27	76

[Description]   Switches from standard mode to page mode.

[Details]   ·This command is enabled only when input at the beginning of a line in standard mode.
·This command has no effect in page mode.
·After printing by **FF** is completed or by using **ESC S**, the printer returns to standard mode.
·This command sets the position where data is buffered to the position specified by **ESC T** within
      the printing area defined by **ESC W**.
·This command is switches the setting for the following commands (in which the values can be set
      independently in standard mode and page mode) to those for page mode.
      ① Set right-side character spacing : **ESC SP, FS S**
      ② Select default line spacing : **ESC 2, ESC3**
·Only valve settings is possible for the following commands in page
      mode; these commands are not executed.
      ① Turn 90° clockwise rotation mode on/off: **ESC V**

      ② Select justification: **ESC a**
      ③ Turn upside-down printing mode on/off: **ESC {**
      ④ Set left margin: **GS L**
      ⑤ Set printable area width: **GS W**
·The following command is ignored in page mode:
      ①Execute test print: **GS W**
·The following command is not available in page mode:

ESC/POS Command Manual

① Print NV bit image : **FS p**
② Define NV bit image : **FS q**
③ Print raster bit image : **GS v 0**
·The printer returns to standard mode when power is turned on, the printer is reset, or **ESC @** is used.

[Reference]   **FF, CAN, ESC FF, ESC S, ESC T, ESC W, GS $, GS ＼**

ESC M n

[Name]   Select character font

[Format]
ASCII	ESC	M	n
Hex	1B	4D	n
Decimal	27	77	n

[Range]   n= 0, 1 , 48, 49

[Description]   Selects character fonts

n	Function
0, 48	Character font A (12 X 24) Selected
1, 49	Character font B (9 X 24) Selected

[Details]   ·The **ESC !** command can also select the character fonts. However, the setting of the last received command is effective.

[Reference]   **ESC !**

ESC R *n*

[Name]   Select an international character set

[Format]
ASCII	ESC	R	*n*
Hex	1B	52	*n*
Decimal	27	82	*n*

[Range] $0 \leq n \leq 13$

[Description]   Selects an international character set *n* from the following table:

n	Character Set
0	U. S. A
1	France
2	Germany
3	U. K.
4	Denmark I
5	Sweden
6	Italy
7	Spain I
8	Japan
9	Norway

10	Denmark II
11	Spain II
12	Latin America

[Default] $n = 0$

[Reference]   3.2.12 International Character Set

Country	ASCII code (Hex)											
	23	24	40	5B	5C	5D	5E	60	7B	7C	7D	7E

ESC S

[Name]   Select standard mode

[Format]   ASCII   ESC   S
              Hex   1B   53
              Decimal 27   83

[Description]   Switches from page mode to standard mode.
[Details]   ·This command is effective only in page mode.
                ·Data buffered in page mode and the printable area developed in page mode are cleared.
                ·This command is switches the setting for the following command (in which the values can be set independently in standard mode and page mode) to those for standard mode:
                     ① Set right-side character spacing: **ESC SP, FS S**
                     ② Select default line spacing : **ESC 2, ESC 3**
                ·The following commands are enabled only to set in standard mode.

① Set printing area in page mode : **ESC W**

② Set print direction in page mode : **ESC T**

·The following commands are ignored in standard mode.

① Set absolute vertical print position in page mode : **GS $**

② Set relative vertical print position in page mode : **GS **

·Standard mode is selected automatically when power is turned on, the printer is reset, or command **ESC @** is used.

[Reference]   **FF, ESC FF, ESC L**

ESC T *n*

[Name]	Select print direction in page mode

[Format]

ASCII	ESC	T	*n*
Hex	1B	54	*n*
Decimal	27	84	*n*

[Range]   0≤*n*≤3,
48≤*n*≤51

[Description]   Select the print direction and starting position in page mode.

n specifies the print direction and starting position as follows:

n	Print Direction	Starting Position
0, 48	Left to right	Upper left(A in the figure)
1, 49	Bottom to top	Lower left(B in the figure)
2, 50	Right to left	Lower right(C in the figure)
3, 51	Top to bottom	Upper right(D in the figure)
[Details]   ·When the command is input in standard mode, the printer executes only internal flag operation. This command does not affect printing in standard mode.

·This command sets the position where data is buffered within the printing area set by **ESC W**.

·Parameters for horizontal or vertical motion units *(x or y)* differ as follows, depending on the starting position of the printing area:

① If the starting position is the upper left or lower right of the printing area, data is buffered in the direction perpendicular to the paper feed direction:

Commands using horizontal motion units: **ESC SP, ESC $, ESC **

Commands using vertical motion units: **ESC 3, ESC J, GS $, GS **

② If the starting position is the upper right or lower left of the printing area, data is buffered in the paper feed direction :

Commands using horizontal motion units : **ESC 3, ESC J, GS &, GS **

Commands using vertical motion units : **ESC SP, ESC $, ESC **

[Default]	*n* = 0

[Reference]	**ESC $, ESC L, ESC W, ESC \ , GS $, GS **

ESC V *n*

[Name]	Turn 90° clockwise rotation mode on/off

[Format]	ASCII	ESC	V	*n*
	Hex	1B	56	*n*
	Decimal	27	86	*n*

[Range]	0≤*n*≤1,48≤*n*≤49

[Description]	Turns 90° clockwise rotation mode on or off.
	n is used as follows:

n	Function
0, 48	Turns off 90˚ clockwise rotation mode
1, 49	Turns on 90˚ clockwise rotation mode

[Details]	·When underline mode is turned on, the printer does not underline 90° clockwise-rotated characters.
	·Double-width and double-height commands in 90° rotation mode enlarge characters in the opposite directions from double height and double-width commands in normal mode.
	·This command affects printing in standard mode. However, the setting is always effective.

[Default]	*n* = 0

[Reference]	**ESC !, ESC –**

ESC W *xL xH yL yH dxL dxH dyL dyH*

[Name]	Set printing area in page mode

[Format]	ASCII	ESC	W	*xL xH yL yH dxL dxH dyL dyH*
	Hex	1B	57	*xL xH yL yH dxL dxH dyL dyH*
	Decimal	27	87	*xL xH yL yH dxL dxH dyL dyH*

[Range]	0≤ *xL xH yL yH dxL dxH dyL dyH*≤255 (except *dxL=dxH=0 or dyL=dyH=0*)

| [Description]	·The horizontal starting position, vertical starting position, printing area width, and printing area height are defined as x0, y0, dx, dy, respectively.
	Each setting for the printable area is calculated as follow:
	x0 = [(xL + xH x 256) x (horizontal motion unit)]
	y0 = [(yL + yH x 256) x (vertical motion unit)]

$$dx = [(dxL + dxH \times 256) \times (\text{horizontal motion unit})]$$
$$dy = [(dyL + dyH \times 256) \times (\text{vertical motion unit})]$$

The printing area is set as shown in the figure below.

[Details] ·If this command is input in standard mode, the printer executes only
   internal flag operation. This command does not affect printing in standard mode.

·If the horizontal or vertical starting position is set outside the printable area, the printer stops
   command processing and processes the following data as normal data.

·If the printing area width or height is set to 0, the printer stops command processing and
   processes the following data as normal data.

·This command sets the position where data is buffered to the position specified by **ESC T** within
   the printing area.

·If (horizontal starting position + printing area width) exceeds the printable area, the printing area
   width is a automatically set to (horizontal printable - horizontal starting position).

·If (vertical starting position + printing area height) exceeds the printable area, the printing area
   height is automatically   set to(vertical printable area - vertical starting position).

·Use the horizontal motion unit for setting the horizontal starting position area width, and use the
vertical motion unit for setting the vertical starting position and printing area height.

·When the horizontal starting position, vertical starting position, printing area width, and printing
   area height are   defined as X, Y, Dx, and Dy respectively, the printing area is set as shown in
   the figure below.
·This printable area for this printer is approximately 72.2 mm {512/180"}
   in the horizontal direction and approximately 117.3 mm {1662/360"} in the vertical direction.

[Default] $xL = xH = yL = yH = 0$
             $dxL = 0, dxH = 2, dyL = 126, dyH = 6$

[Reference]   **CAN, ESC L, ESC T**

ESC \ *nL nH*

[Name]   Set relative print position

[Format]
ASCII	ESC	\	*nL*	*nH*
Hex	1B	5C	*nL*	*nH*
Decimal	27	92	*nL*	*nH*

[Range] $0 \le nL \le 255$
             $0 \le nH \le 255$

[Description]   Sets the print starting position based on the current position by using the horizontal or vertical
                  motion unit.
                  ·This command sets the distance from the current position to [(nL + nH x 256) x (horizontal or

vertical unit)].

[Details] ·Any setting that exceeds the printable area is ignored.

·When pitch *N* is specified to the right :

$$n_L + n_H \times 256 = N$$

When pitch *n* is specified to the left (the negative direction), use the complement of 65536.

When pitch *n* is specified to the left : $n_L + n_H \times 256 = 65536 - n.$

·The print starting position moves from the current position to [*n* x horizontal or vertical motion unit].

·In standard mode, the horizontal motion unit is used.

·In page mode, the horizontal or vertical motion unit differs as follows,
depending on the starting point of the printing area :

①When the starting position is set to the upper left or lower right of the printable area using **ESC T**, the horizontal motion unit (*x*) is used.

②When the starting position is set to the upper right or lower left of the printable area using **ESC T,** the vertical motion unit (*y*) is used.

[Reference] **ESC $**

ESC a *n*

[Name] Select justification

[Format]

ASCII	ESC	a	*n*
Hex	1B	61	*n*
Decimal	27	97	*n*

[Range] $0 \le n \le 2, 48 \le n \le 50$

[Description] Aligns all the data in one line to the specified position

n selects the justification as follows:

n	Justification
0, 48	Left justification
1, 49	Centering
2, 50	Right justification

[Details] ·The command is enabled only when processed at the beginning of the line in standard mode.

·If this command is input in page mode, the printer performs only internal flag operation.

·This command has no effect in page mode.

·This command executes justification in the printing area.

·This command justifies the space area according to **HT, ESC $** or **ESC** ＼

[Default] *n* = 0

[Example]

Left justification	Centering	Right justification
ABC ABCD ABCDE	ABC ABCD ABCDE	ABC ABCD ABCDE

ESC d *n*

[Name]	Print and feed *n* lines			
[Format]	ASCII	ESC	d	*n*
	Hex	1B	64	*n*
	Decimal	27	100	*n*

[Range]   0≤*n*≤255

[Description]   Prints the data in the print buffer and feeds *n* lines.

[Details]   ·This command sets the print starting position to the beginning of the line
           ·This command does not affect the line spacing set by **ESC 2** or **ESC 3**.
           ·The maximum paper feed amount is 1016 mm{40"}. If the paper feed amount(n x line spacing) of more than 1016 mm{40"} is specified, the printer feeds the paper only 1016 mm{40"}.

[Reference]   **ESC 2, ESC 3**

ESC t *n*

[Name]   Select character code table

[Format]	ASCII	ESC	t	*n*
	Hex	1B	74	*n*
	Decimal	27	116	*n*

[Range]   0≤*n*≤5, 16≤*n*≤26, *n* = 255

[Description]   Selects a page *n* from the character code table.

n	Page
0	PC437 [U.S.A., Standard Europe]
1	Katakana
2	PC850 [Multilingual]
3	PC860 [Portuguese]
4	PC863 [Canadian-French]
5	PC865 [Nordic]
17	PC866 [Cyrillic #2]
255	Space page

[Default]   *n* = 0

[Reference]   Factory default set code page

Code page	Language
CP737	Greek
CP852	Latin2

CP857	Turkish
CP862	Hebrew
CP864	Arabic
CP866	Cyrillic
CP1252	Latin1(Spanish)
CP1253	Greek
ISO8859	Latin5(Turkish)

ESC { *n*

[Name]   Turns on/off upside-down printing mode

[Format]   ASCII   ESC   {   *n*
                Hex   1B   7B   *n*
                Decimal   27   123   *n*

[Range] $0 \leq n \leq 255$

[Description]   Turns upside-down printing mode on or off.
                ·When the LSB of *n* is 0, upside-down printing mode is turned off.
                ·When the LSB of *n* is 1, upside-down printing mode is turned on.

[Details]   ·Only the lowest bit of *n* is valid.
                ·This command is enabled only when processed at the beginning of a line in standard mode.
                  ·When this command is input in page mode, the printer performs only internal flag operations.
                  ·This command does not affect printing in page mode.
                  ·In upside-down printing mode, the printer rotates the line to be printed by 180° and
                    then prints it.

[Default]   *n* = 0

[Example]

27
FS p *n m*

[Name]   Print NV bit image

[Format]   ASCII   FS   p   *n*   *m*
                Hex   1C   70   *n*   *m*
                Decimal   28   112   *n*   *m*

[Range] $1 \le n \le 255$
                $0 \le m \le 3, 48 \le m \le 51$

[Description]   Prints a NV bit image *n* using the mode specified by *m*.

m	Mode	Vertical Dot Density	Horizontal Dot Density
0, 48	Normal	180 dpi	180 dpi
1, 49	Double-width	180 dpi	90 dpi
2, 50	Double-height	90 dpi	180 dpi
3, 51	Quadruple	90 dpi	90 dpi

[dpi : dots per 25.4mm {1"}]

[Details]   · *n* is the number of the NV bit image (defined using the **FS q** command).

                · *m* specifies the bit image mode.

                · *NV* bit image means a bit image which is defined in a non-volatile memory by **FS q** and

printed by **FS p**.

·This command is not effective when the specified NV bit image has not been defined.

·In standard mode, this command is effective only when there is no data in the print buffer.

·In page mode, the command is not effective.

·This command is not affected by print modes (emphasized, double-strike, underline, character size, white/black reverse printing, or 90° rotated characters, etc.), except upside-down printing mode.

·If the printing area width set by **GS L** and **GS W** for the NV bit image is less than one vertical line the following processing is performed only on the line in question. However, in NV bit image mode, one vertical line means 1 dot in normal mode (m=0,48) and in double-height mode (m=2,50), and it means 2 dots in double-width mode (m=1,49) and in quadruple mode (m=3,51).

①The printing area width is extended to the right in NV bit image mode

②If the printing area width cannot be extended by one line vertically, the left margin is reduced to accommodate one line vertically.

·If the downloaded bit-image to be printed exceeds one line, the excess data is not printed.
·This command feeds dots (for the height n of the NV bit-image) in normal and double-width modes, and(for the height n x 2 of the NV bit-image) in double-height and quadruple modes, regardless of the line spacing specified by **ESC 2** or **ESC 3**.
·After printing the bit image, this command sets the print position to the beginning of the line and processes the data that follows as normal data.

[References]   **ESC *, FS q, GS/, GS v 0**

FS q *n* [*xL xH yL yH d1...dk*] 1...[*xL xH yL yH d1...dk*]*n*

$k = (xL + xH \times 256) \times (yL + yH \times 256) \times 8$
Total defined data area = 2M bits (256K bytes)

[Description]   Define the NV bit image specified by *n*.

[Details]   ·*n* specifies the number of the defined NV bit image.

·xL, xH specifies (xL + xH × 256) × 8 dots in the horizontal direction for

the NV bit image you are defining.

·yL, yH specifies (yL + yH × 256) × 8 dots in the vertical direction for the NV

bit image you are defining.

·This command cancels all NV bit image that have already been defined by this command.

The printer can not redefine only one of several data definitions previously defined.

In this case, all data needs to be sent again.

·From the beginning of the processing of this command till the finish of

hardware reset, mechanical operations (including initializing the position

of the printer head when the cover is open, paper feeding by using the

FEED button, etc.) cannot be performed.

·During processing this command, the printer is in BUSY when writing the

data to the NV user memory and stops receiving data. Therefore it is

prohibited to transmit the data including the real-time commands during

the execution of this command.

·NV bit image means a bit image which is defined in a non-volatile memory

by **FS q** and printed by **FS p**.

·In standard mode, this command is effective only when processed at the

beginning of the line.

·In page mode, this command is not effective.

·This command is effective when 7 bytes <FS-yH> is processed as a normal value.

·When the amount of the data exceeds the capacity left in the range

defined by xL, xH, yL, yH, the printer processes xL, xH, yL, yH out of the defined range.

·In the first group of NV bit image, when any of the parameters xL, xH, yL,

yH, is out of the definition range, the command is disabled.

·In groups of NV bit image other than the first one, when the printer

processes xL, xH yL, yH out of the defined range, it stops processing this

command and stars writing into the NV images. At this time, NV bit image

that haven't been defined are disabled (undefined), but any NV bit

images before that are enabled.

·The *d* indicates the definition data. In data (d) a 1 bit specifies a dot to be

printed and a 0 bit specifies a dot not to be printed.

·This command defines n as the number of a NV image. Number rise in

order from NV bit image 01H. Therefore, the first data group [xL xH yL yH

d1...dk] is NV bit image 01H, and the last data group [xL xH yL yH

d1...dk] is NV bit image *n*. The total agrees with the number of NV bit

images specified by command **FS p**.

·A definition data of a NV bit image consists of [xL xH vL vH d1...dk].

Therefore, when only one NV bit image is defined n=1, the printer

processes a data group [xL xH yL yH d1...dk] once. The printer uses

([data:(xL + xH $\times$256) $\times$ (yL + yH $\times$ 256) $\times$ 8] + [header:4]) bytes of NV memory.

·The definition area in this printer is a maximum of 2M bits (256K bytes).

This command can define several NV bit image, but cannot define a bit

image data whose total capacity [bit image data + header] exceeds 2M bytes (256K bytes).

·The printer is busy immediately before writing into NV memory, regardless

of the setting of DIP switch 2-1.

·The printer does not transmit ASB status and perform status detection

during processing of the command even when ASB is specified.

·When this command is received during macro definition, the printer ends

macro definition, and begins performing this command.

·Once a NV bit image is defined, it not erased by performing **ESC @**, reset, and power off.

·This command performs only definition of a NV bit image and does not

perform printing. Printing of the NV bit image is performed by the **FS q** command.

[Notes]   ·Frequent write command execution may cause damage the NV memory.

Therefore, it is recommended to write the NV memory 10 times or less a day.

·The printer performs a hardware reset after the procedure to place the

image into the NV memory. Therefore, user-defined characters,

downloaded bit image, and macros should be defined only after

completing this command. The printer clears the receive and print buffers

and resets the mode to the mode that was in effect at power on. At this time,

DIP switch setting are checked again.
n is the number of the NV bit

[Reference]   **FS p**

[Example]   When *x*L = 64, *x*H = 0, *y*L = 96, *y*H = 0

(xL + xH x 256) x 8 dots = 512 dots

d97

d1

d49057

d2   MSB

d3

          LSB

d96   d49152

(yL + yH x 256) x 8 dots = 768 dots
GS ! *n*

[Name]	Select character size

[Format]

	ASCII	GS	!	*n*
	Hex	1D	21	*n*
	Decimal	29	33	*n*

[Range] $0 \leq n \leq 255$
            ($1 \leq$ vertical number of times ≤ 8, $1 \leq$ horizontal number of times ≤ 8)

[Description]   Selects the character height using bits 0 to 3 and selects the character width using bits 4 to 7, as follows:

Bit	Off/On	Hex	Decimal	Function
0	Character height selection. See Table 2.			
1				
2				
3				
4	Character width selection. See Table 1.			
5				
6				
7				

Table 1. Character Width Selection.   Table 2. Character Height Selection.

Hex	Decimal	Width		Hex	Decimal	Width

00	0	1	(normal)
10	16	2	(double-width)
20	32	3	
30	48	4	
40	64	5	
50	80	6	
60	96	7	
70	112	8	

00	0	1	(normal)
01	1	2	(double-height)
02	2	3	
03	3	4	
04	4	5	
05	5	6	
06	6	7	
07	7	8	

[Details]   ·This command is effective for all characters (except for HRI characters).
·If n is outside of the defined range, this command is ignored.
·In standard mode, the vertical direction is the paper feed direction, and
the horizontal direction is perpendicular to the paper feed direction.
However, when character orientation changes in 90° clockwise-rotation mode, the relationship between vertical and horizontal directions is reversed.
·In page mode, vertical and horizontal directions are based on the character orientation.
·When characters are enlarged with different sizes on one line, all the characters on the line are aligned at the baseline.
·The **ESC !** command can also turn double-width and double- height modes on or off.
However, the setting of the last received command is effective.

[Default] $n = 0$

[Reference]   **ESC !**

GS $ *nL nH*

[Name]   Set absolute vertical print position in page made

[Format]   ASCII   GS $ *nL*   *nH*
Hex   1D   24   *nL*   *nH*
Decimal   29   36   *nL*   *nH*

[Range] $0 \le nL \le 255, 0 \le nH \le 255$

[Description]   ·Sets the absolute vertical print starting position for buffer character data in page mode.
·This command sets the absolute print position to [($nL + nH \times 256$) × (vertical or horizontal motion unit)] inches.
·If the [($nL + nH \times 256$) × (vertical or horizontal motion unit)] exceeds the specified printing area, this command is ignored.
·The horizontal starting buffer position does not move.
·The reference starting position is that specified by **ESC T**.
·This command operates as follows, depending on the starting position of the printing area specified by **ESC T**:
①When the starting position is set to the upper left or lower right, this command sets the absolute position in the vertical direction.
②When the starting position is set to the upper right or lower left, this command sets the absolute position in the horizontal direction.

[Reference]   **ESC $, ESC T, ESC W, ESC ＼, GS ＼**

GS ∗ x y *d1...d* (x × y × 8)

[Name]		Define downloaded bit image

[Format]

	ASCII	GS	∗	*x*	*y*	*d1 … d* (*x* x *y* x 8)
	Hex	1D	2A	*x*	*y*	*d1 … d* (*x* x *y* x 8)
	Decimal	29	42	*x*	*y*	*d1 … d* (*x* x *y* x 8)

[Range]
$1 \leq x \leq 255$
$1 \leq y \leq 48$
x x $y \leq 1536$
$0 \leq d \leq 255$

[Description]   Defines a downloaded bit image with the number of dots specified by *x* and *y*.
·*x* indicates the number of dots in the horizontal direction.
·*y* indicates he number of dots in the vertical direction.

[Details]   ·The number of dots in the horizontal direction is *x* x 8, in the vertical
direction it is *y* x 8.
·If *x* x *y* is out of the specified range, this command is disabled.
·The d indicates bit-image data. Data *(d)* specifies a bit printed to 1 and not printed to 0.
·The downloaded bit image definition is cleared when:
  ① ESC@ is executed.
  ② ESC & is executed.
  ③ FS q is executed.
  ④ Printer is reset or the power is turned off.
·The following figure shows the relationship between the downloaded bit
image and the printed data.
[Reference]   **GS ＼**

GS / *m*

[Name]   Print down-loaded bit image

[Format]   ASCII   GS   /   *m*
                Hex   1D   2F   *m*
                Decimal   29   47   *m*

[Range] $0 \le m \le 3, 48 \le m \le 51$

[Description]   Prints a downloaded bit image using the mode specified by *m*.
                m selects a mode from the table below:

m	Mode	Vertical Dot Density	Horizontal Dot Density
0, 48	Normal	180 DPI	180 DPI
1, 49	Double-width	180 DPI	90 DPI
2, 50	Double-height	90 DPI	180 DPI
3, 51	Quadruple	90DPI	90 DPI

[dpi : dots per 25.4 mm {1"}]

[Details]   ·This command is ignored if a downloaded bit image has not been defined.
                ·In standard mode, this command is effective only when the on data exists
                  in the print buffer.
                ·This command is not affected by print modes (emphasized, double-strike,
                  underline, or character size, white/black reverse printing), except for
                  upside down mode.
                ·If the downloaded bit-image to be printed exceeds the printable area, the
                  excess data is not printed.
                ·If the printing area width set by GS L and GS W is less than one line
                  vertical, the following processing is performed only on the line in
                    question:
                    ① The printing area width is extended to the right up to one line in
                        vertical. In this case, printing does not exceed the printable area.

② If the printing area width cannot be extended by one line in vertical, the left margin is reduced to accommodate one line in vertical.

[Reference] **GS ∗**

GS B *n*

[Name] Turn white/black reverse printing mode

[Format]

ASCII	GS	B	*n*
Hex	1D	42	*n*
Decimal	29	66	*n*

[Range] $0 \le n \le 255$

[Description] Turns on or off white/black reverse printing mode.
·When the LSB of *n* is 0, white/black reverse printing mode is turned off.
·When the LSB of *n* is 1, white/black reverse printing mode is turned on.

[Details] ·Only the LSB of *n* is effective.
·This command is available for built-in characters and user-defined characters.
·When white/black reverse printing mode is on, it also applied to character spacing set by **ESC SP**.
·This command does not affect bit image, user-defined bit image, bar code, HRI characters, and spacing skipped by **HT**, **ESC $**, and **ESC ** .
·This command does not affect the space between lines.

·White/black reverse mode has a higher priority than underline mode. Even if underline mode is on, it is disabled (but not canceled) when white/black reverse mode is selected.

[Default] *n* = 0

GS H *n*

[Name] Select printing position of HRI characters

[Format]

ASCII	GS	H	*n*
Hex	1D	48	*n*
Decimal	29	72	*n*

[Range] $0 \le n \le 3, 48 \le n \le 51$

[Description] Selects the printing position of HRI characters when printing a bar code.
n selects the printing position as follows:

n	Printing position
0, 48	Not printed
1, 49	Above the bar code
2, 50	Below the bar code
3, 51	Both above and below the bar code

| [Details] | ·HRI means Human Readable Interpretation. |
| | ·HRI characters are printed using the font specified by **GS f**. |

| [Default] | $n = 0$ |

| [Reference] | **GS f, GS k** |

GS L *nL nH*

[Name]   Set left margin

[Format]

	ASCII	GS	L	*nL*	*nH*
	Hex	1D	4C	*nL*	*nH*
	Decimal	29	76	*nL*	*nH*

[Range] $0 \leq nL \leq 255$
                 $0 \leq nH \leq 255$

[Description]   Sets the left margin using *nL* and *nH*.
                 ·The left margin is set to [($nL + nH \times 256) \times$ (horizontal motion unit)] inches.

Printable area

Left margin   Printing width

[Details]   ·This command is effective only of the beginning of a line.
                 ·If this command is input in page made, the printer performs only internal flag operations.
                 ·This command does not affect printing in page made.
                 ·If the setting exceeds the printable area, the maximum value of the printable area is used.
                 ·The horizontal motion unit (x) is used for calculating the left margin.
                   The calculated result is truncated to the minimum value of the mechanical pitch.

[Default]   *nL* = 0, *nH* = 0

[Reference]   **GS W**

GS W *nL nH*

[Name]   Set printing area width

[Format]   ASCII   GS   W   *nL   nH*
   Hex   1D   57   *nL   nH*
              Decimal   29   87   *nL   nH*

[Range] $0 \leq nL \leq 255$
              $0 \leq nH \leq 255$

[Description] Sets the printing area width to the area specified by *nL* and *nH.*
              ·The printing area width is set to [(*nL* + *nH* x 256) x horizontal motion unit]].

                                        Printable area

              Left margin   Printing area width

[Details]   ·This command is effective only processed at the beginning of the line.
              ·In page mode, the printer performs only internal flag operations.
              ·This command does not affect printing in page mode.
              ·If the [left margin + printing area width] exceeds the printable area, [printable   area width - left
                 margin] is used.
              ·The horizontal motion unit (x) is used for calculating the printing area width. The calculated result
                 is truncated to the minimum value of the mechanical pitch.
              ·If the width set for the printing area is less than the width of one character,   when the character
                 data is developed, the following processing is performed:
                 ①   The printing area width is extended to the right to accommodate one   character.
                              Printable area

              Left margin   Extended to right

              Printing area width set by nL and nH

                 ②   f the printing area width cannot be extended sufficiently, the left margin is   reduced
                       to accommodate one character

                          Printable area
① Extended to right

Left margin   ②Reduce left margin

③   If the printing area width cannot be extended sufficiently, the right space is   reduced.

·If the width set for the printing area is less than one line in vertical, the following   processing is performed only on the line in question when data other than   character data (e.g., bit image, user-defined bit image) is developed:

①   The printing area width is extended to the right to accommodate one line in   vertical for the bit image within the printable area.

②   If the printing area width cannot be extended sufficiently, the left margin is   reduced to accommodate one line in vertical.

·The commands which set the printing area width for bit image printing and its   minimum widths are as follows:

·Bit image (**ESC** *) :

Single density mode = 2 dots

Double density mode = 1 dot

·Downloaded bit image (**GS** /):

Double width mode or Quadruple mode = 2 dots

Normal mode or Double-height mode = 1 dot

·NV bit image (**FS p**) :

Double width mode or Quadruple mode = 2 dots

Normal mode or Double-height mode = 1 dot

·Raster bit image (**GS v 0**) :

Double width mode or Quadruple mode = 2 dots

Normal mode or Double-height mode = 1 dot

[Default] $nL = 0$, $nH = 2$

[Reference]   **GS L**

GS ＼ nL nH

[Name]	Set relative vertical print position in page mode			
[Format]	ASCII	GS	＼	nL	nH
	Hex	1D	5C	nL	nH
	Decimal	29	92	nL	nH

[Range] $0 \le nL \le 255$

$0 \le nH \le 255$

[Description]   Sets the relative vertical print starting position from the current position in page mode.

·This command sets the distance from the current position to [(nL + nH x 256)   vertical or horizontal motion unit] inches.

[Details]   ·This command is ignored unless page mode is selected.

·When pitch N is specified to the movement downward:

$nL + nH \times 256 = N$

When pitch N is specified to the movement upward (the negative direction), use   the complement of 65536.

When pitch N is specified to the movement upward:

$nL + nH \times 256 = 65536 - N$

·Any setting that exceeds the specified printing area is ignored.

·This command function as follows, depending on the print starting position set   by **ESC T:**
①   When the starting position is set to the upper left or lower right of the   printing, the vertical motion unit (y) is used.
②   When the starting position is set to the upper right or lower left of the printing   area, the horizontal motion unit (x) is used.

[Reference]   **ESC $, ESC T, ESC W, ESC ＼, GS $**

GS a *n*

[Name]   Enable/Disable Automatic Status Back (ASB)

[Format]   ASCII   GS   a   *n*
                      Hex   1D   61   *n*
                      Decimal   29   97   *n*

[Range] $0 \leq n \leq 255$

[Description]   Enables or disables ASB and specifies the status items to include, using n as   follows:

Bit	Off/ On	Hex	Decimal	Status for ASB
0	Off	00	0	.
	On	01	1	
1	Off	00	0	On-line/off-line status disabled.
	On	02	2	On-line/off-line status enabled
2	Off	00	0	Error status disabled
	On	04	4	Error status enabled.
3	Off	00	0	Paper roll sensor status disabled.
	On	08	8	Paper roll sensor status enabled.
4–7	-	-	-	Undefined.

[Details]   ·If any of the status items in the table above are enabled, the printer
transmits   the status when this command is executed. The printer automatically transmits the status whenever the enabled status item changes. The disabled status   items may change, in this case, because each status transmission represents   the current status.
·If all status items are disabled, the ASB function is also disabled.
·If the ASB is enabled as a default, the printer transmits the status when the printer data reception and transmission is possible at the first time from when   the printer is turned on.
·The following four status bytes are transmitted without confirming whether the   host is ready to receive data. The four status bytes must be consecutive,   except for the XOFF code.
·Since this command is executed after the data is processed in the receive
buffer, there may be a time lag between data reception and status transmission.
·When using **DLE EOT**, **GS I** , or **GS r**, the status transmitted by these
commands and ASB status must be differentiated.
·The status to be transmitted are as follows:

First byte (printer information)

Bit	Off/On	Hex	Decimal	Status for ASB
0	Off	00	0	Not used. Fixed to Off
1	Off	00	0	Not used. Fixed to Off
2	Off	00	0	
	On	04	4	
3	Off	00	0	On-line

	On	08	8	Off-line
4	On	10	16	Not used. Fixed to On
5	Off	00	0	Cover is closed
	On	20	32	Cover is open
6	Off	00	0	Paper is not being fed by using the PAPER FEED button
	On	40	64	Paper is being fed by using the PAPER FEED button
7	Off	00	0	Not used. Fixed to Off

Second byte (printer information)

Bit	Off / On	Hex	Decimal	Status for ASB
0	-	-	-	Undefined.
1	-	-	-	Undefined.
2	-	-	-	Undefined.
3	Off	00	0	
	On	08	8	
4	Off	00	0	Not used. Fixed to Off
5	Off	00	0	No unrecoverable error
	On	20	32	Unrecoverable error occurred
6	Off	00	0	No automatically recoverable error
	On	40	64	Automatically recoverable error occurred
7	Off	00	0	Not used. Fixed to Off

Bit 3: If these errors occur due to paper jams or the like, it is possible to recover by correcting the cause of the error and executing **DLE ENQ** n ($1 \leq n \leq 2$). If an error due to a circuit failure (e.g. wire break) occurs, it is impossible to recover.

Bit 6: When printing is stopped due to high print head temperature until the print head temperature drops sufficiently or when the paper roll cover is open during printing, bit 6 is On.

Third byte (paper sensor information)

Bit	Off / On	Hex	Decimal	Status for ASB
0,1	Off	00	0	
	On	03	3	
2,3	Off	00	0	Paper roll end sensor: paper present
	On	0C	12	Paper roll end sensor: paper not present
4	Off	00	0	Not used. Fixed to Off
5,6	-	-	-	Undefined
7	Off	00	0	Not used. Fixed to Off

Fourth byte (paper sensor information)

Bit	Off / On	Hex	Decimal	Status for ASB
0-3	-	-	-	Undefined
4	Off	00	0	Not used. Fixed to Off
5,6	-	-	-	Undefined
7	Off	00	0	Not used. Fixed to Off.

[Default]   n = 0.

[Reference]   **DLE EOT**, **GS r**

GS f n

[Name]   Select font for Human Readable Interpretation (HRI)characters

[Format]

ASCII	GS	f	n
Hex	1D	66	n
Decimal	29	102	n

[Range] n = 0, 1, 48, 49

[Description]   selects a font for the HRI characters used when printing a bar code.
       n selects the font from the following table:

n	Font
0, 48	Font A (12 x 24)
1, 49	Font B (9 x 17)

[Details]   ·HRI means Human Readable Interpretation.
       ·HRI characters are printed of the position specified by **GS H**.

[Default] n = 0

[Reference]   **GS H, GS k**

GS h n

[Name]   Select bar code height

[Format]   ASCII   GS h n
       Hex 1D 6B n
       Decimal 29 104 n

[Range] $1 \le n \le 255$

[Description]   Select the height of the bar code.
       n specifies the number of dots in the vertical direction.

[Default] n = 162

[Reference]   **GS k**

①GS k m d1...dk NUL ② GS k m n d1...dn

[Name]   Print bar code

[Format]   ① ASCII   GS   k   *m*   *d1...dk*   NUL
               Hex   1D   6B   *m*   *d1...dn*   00
               Decimal   29   107   *m*   *d1...dn*   *0*
              ② ASCII   GS   k   *m*   *n*   *d1...dn*
               Hex   1D   6B   *m*   *n*   *d1...dn*
               Decimal   29   107   *m*   *n*   *d1...dn*

[Range]   ① 0 ≤ *m* ≤ 6(k and d depends on the code system used)
              ② 65 ≤ *m* ≤ 73 *n* and d depends on the code system used)

[Description]   Selects a bar code system and prints the bar code.
                  m selects a bar code system as follows:

	m	Bar Code System	Number of Character	Remarks
①	0	UPC – A	11 ≤ k ≤ 12	48 ≤ d ≤ 57
	1	UPC – E	11 ≤ k ≤ 12	48 ≤ d ≤ 57
	2	EAN13	12 ≤ k ≤ 13	48 ≤ d ≤ 57
	3	EAN8	7 ≤ k ≤ 8	48 ≤ d ≤ 57
	4	CODE39	1 ≤ k	48 ≤ d ≤ 57, 65 ≤ d ≤ 90, 32,36,37,43,45,46,47
	5	ITF	1 ≤ k (even number)	48 ≤ d ≤ 57
	6	CODABAR	1 ≤ k	48 ≤ d ≤ 57, 65 ≤ d ≤ 68, 36,43,45,46,47,58
②	65	UPC – A	11 ≤ n ≤ 12	48 ≤ d ≤ 57
	66	UPC – E	11 ≤ n ≤ 12	48 ≤ d ≤ 57
	67	EAN13	12 ≤ n ≤ 13	48 ≤ d ≤ 57
	68	EAN8	7 ≤ n ≤ 8	48 ≤ d ≤ 57
	69	CODE39	1 ≤ n ≤ 255	48 ≤ d ≤ 57, 65 ≤ d ≤ 90, 32,36,37,43,45,46,47
	70	ITF	1 ≤ n ≤ 255 (even number)	48 ≤ d ≤ 57
	71	CODABAR	1 ≤ n ≤ 255	48 ≤ d ≤ 57, 65 ≤ d ≤ 68, 36,43,45,46,47,58
	72	CODE93	1 ≤ n ≤ 255	0 ≤ d ≤ 127
	73	CODE128	2 ≤ n ≤ 255	0 ≤ d ≤ 127

[Details for ①]   ·This command ends with a NUL code.
                     ·When the bar code system used is UPC-A or UPC-E, the printer prints the bar code data after receiving 12 bytes bar code data and processes the following data as normal data.
                     ·When the bar code system used is JAN 13, the printer prints the bar code after receiving 13 bytes bar code data and processes the following date as normal data.
                     ·When the bar code system used is JAN 8, the printer prints the bar code after receiving 8 bytes bar code data and processes the following data as normal data.
                     ·The number of data for ITF bar code must be even numbers. When an odd number of data is input, the printer ignores the last received data.

[Details for ②]   ·*n* indicates the number of bar code data, and the printer processes n bytes from the next character data as bar code data.
                     ·If *n* is outside of the specified range the printer stops command processing and processes the following data as normal data.

[Details in standard made]
                     ·If *d* is outside of the specified range, the printer only feeds paper and process the following data as normal data.
                     ·If the horizontal size exceeds printing area, the printer only feeds the paper.
                     ·This command feeds as much paper as is required to print the bar code, regardless of the line

spacing specified by **ESC 2** or **ESC 3**.

·This command is enabled only when on data exists in the print buffer.

When data exists in the print butter, the printer processes the data following m as normal data.

·After printing bar code, this command sets the print position to the beginning of the line.

·This command is not affected by print modes (emphasized, double-strike, underline, character size, white/black reverse printing, or 90˚ rotated character, etc), except for upside-down printing mode.

[Details in page made]

·This command develops bar coed data in the print buffer, but does not print it. After processing bar cod data, this command moves the print position to the right side dot of the bar code.

·If d is out of the specified rang, the printer stops command processing and processes the following data as normal data. In this case, the data butter position does not change.

·If bar code width exceeds the printing area, the printer does not print the bar code but moves the data buffer position to the left side out of the printing area.

·Refer to Figure 3.12.3 for bar code data buffer position.

When CODE93 (m=72) is used :

·The printer prints an HRI character (□)as start character at the beginning of the HRI character string.

·The printer prints an HRI character(□)as a stop character at the end of the HRI character string.

·The printer HRI characters (■+an alphabetic character) as a control character(<00>H to <1F>H and <7F>H):

Control character			HRI character	Control character			HRI character
ASCⅡ	Hex	Decimal		ASCⅡ	Hex	Decimal	
NUL	00	0	■U	DLE	10	16	■P
SOH	01	1	■A	DC1	11	17	■Q
STX	02	2	■B	DC2	12	18	■R
ETX	03	3	■C	DC3	13	19	■S
EOT	04	4	■D	DC4	14	20	■T
ENQ	05	5	■E	NAK	15	21	■U
ACK	06	6	■F	SYN	16	22	■V
BEL	07	7	■G	ETB	17	23	■W
BS	08	8	■H	CAN	18	24	■X
HT	09	9	■I	EM	19	25	■Y
LF	0A	10	■J	SUB	1A	26	■Z
VT	0B	11	■K	ESC	1B	27	■A
FF	0C	12	■L	FS	1C	28	■B
CR	0D	13	■M	GS	1D	29	■C
SO	0E	14	■N	RS	1E	30	■D
SI	0F	15	■0	US	1F	31	■E
				DEL	7F	127	■T

[Example]   Printing **GS k** 72   7   67   111   100   101   13   57   51

When CODE 128 (m = 73) is used:

·Refer to Appendix J for the information of the CODE 128 bar code and is code table.

·When using the CODE 128 in this printer, take the following points into account for data transmission:

① The top of the bar code data string must be code set selection character (any of CODE A, CODE B or CODE C) which selects the first code set.

② Special characters are defined by combining two characters "{" and one character. The ASCⅡ character "{" is defined by transmitting "{" twice consecutively.

Specific character	Transmit data		
	ASCⅡ	Hex	Decimal
SHIFT	{S	7B,53	123,83
CODE A	{A	7B,41	123,65
CODE B	{B	7B,42	123,66
CODE C	{C	7B,43	123,67
FNC1	{1	7B,31	123,49
FNC2	{2	7B,32	123,50
FNC3	{3	7B,33	123,51
FNC4	{4	7B,34	123,52
"{"	{{	7B,7B	123,123

[Example]   Example data for printing "No. 123456"

In this example, the printer first prints "No." using CODE B, then prints the following numbers using CODE C.

GS k 73   10   123   66   78   111   46   123   67   12   34   56

·If the top of the bar code data is not the code set selection character, the printer stops command processing and processes the following data as normal data.

·If combination of "{"and the following character does not apply any special character, the printer stops command processing and processes the following data as normal data.

·If the printer receives characters that cannot be used in the special code set, the printer stops command processing and processes the following data as normal data.

·The printer does not print HRI characters that correspond to the shift characters or code set selection characters.

·HRI character for the function character is space.

·HRI characters for the control character (<00>H to <1F>H and <7F>H)are
  space.
<Others> Be sure to keep spaces on both right and left sides of a bar code.
  (Spaces are different depending on the types of the bar code.)

GS r *n*

[Name]	Transmit status

[Format]

	ASCII	GS	r	*n*
	Hex	1D	72	*n*
	Decimal	29	114	*n*

[Range] n=1, 2, 49, 50

[Description] Transmits the status specified by n as follows:

n	Function
1,49	Transmits paper sensor status
2,50	

[Details]
·When using a serial interface
·When DTR/DSR control is selected, the printer transmits only 1 byte after confirming the host is ready to receive data (DSR signal is SPACE). If the host computer is not ready to receive data (DSR signal is MARK), the printer waits until the host is ready.
 When XON/XOFF control is selected, the printer transmits only 1 byte without confirming the condition of the DSR signal.
·This command is executed when the data in the receive buffer is developed. Therefore, there may be a time lag between receiving this command and transmitting the status, depending on the receive buffer status.
·When Auto Status Back (ASB) is enabled using **GS** a, the status transmitted by **GS r** and the ASB status must be differentiated using the table in Appendix G.
·The status types to be transmitted are shown below:

Paper sensor status (n = 1, 49):

Bit	Off / On	Hex	Decimal	Status for ASB
0,1	Off	00	0	
	On	03	3	
2,3	Off	00	0	Paper roll end sensor: paper adequate.
	On	(0C)	(12)	Paper roll end sensor: paper near end.
4	Off	00	0	Not used. Fixed to Off.
5,6	-	-	-	Undefined.
7	Off	00	0	Not used. Fixed to Off.

Bits 2 and 3: When the paper end sensor detects a paper end, the printer goes off-line and does not execute this command. Therefore, bits 2 and 3 do not transmit the status of paper end.

GS v 0 m xL xH yL yH d1....dk

[Name]	Print raster bit image

[Format] ASCII   GS   v   0   m   xL   xH   yL   yH   d1...dk
          Hex   1D   76   30   m   xL   xH   yL   yH   d1...dk
          Decimal 29   118 48   m   xL   xH   yL   yH   d1...dk

[Range] $0 \leq m \leq 3, 48 \leq m \leq 51$
          $0 \leq xL \leq 255$
          $0 \leq xH \leq 255$
          $0 \leq yL \leq 255$
          $0 \leq yH \leq 8$
          $0 \leq d \leq 255$
          $k=(xL + xH \times 256) \times (yL + yH \times 256)$ $(k \neq 0)$

[Description]   Selects Raster bit-image mode.
                The value of m selects the mode, as follows:

m	Mode	Vertical Dot Density	Horizontal Dot Density
0, 48	Normal	180 dpi	180 dpi
1, 49	Double-width	180 dpi	90 dpi
2, 50	Double-height	90 dpi	180 dpi
3, 51	Quadruple	90 dpi	90 dpi

[dpi : dots per 25.4mm {1"}]

·xL, xH, select the number of data bytes ($xL+xH \times 256$) in the horizontal direction for the bit image.

·yL, yH, select the number of data bytes ($xL+xH \times 256$) in the vertical direction for the bit image.

[Details]   ·In standard mode, this command is effective only when there is no data in the print buffer.

·This command has no effect in all print modes (character size, emphasized, double-strike, upside-down, underline, white/black reverse printing, etc.) for raster bit image.

·If the printing area width set by **GS L** and **GS W** is less than the minimum width, the printing area is extended to the minimum width only on the line in question. The minimum width means 1 dot in normal (m=0,48) and double-height (m=2,50), 2dots in double-width (m=1,49) and quadruple (m=3,51) modes.

·Data outside the printing area is ready in and discarded on a dot-by-dot basis.

·The position at which subsequent characters are to be printed for raster bit image is specified by **HT**(Horizontal Tab) **ESC $** (Set absolute print position), **ESC ** (Set relative print position), and **GS L** (Ste left margin). If the position at which subsequent characters are to be printed is not a multiple of 8, print speed may decline.

·The **ESC a** (Select justification) setting is also effective on raster bit image.

·When this command is received during macro definition, the printer ends

    macro definition, and begins performing this command. The definition of

    the command should be cleared.

·d indicates the bit-image data. Set time a bit to 1 prints a dot and setting

    it to 0 does not print a dot.

GS w *n*

[Name]	Set bar code width		
[Format]	ASCII	GS	w	*n*
	Hex	1D	77	*n*
	Decimal	29	119	*n*

[Range] $2 \leq n \leq 6$

[Description]   Set the horizontal size of the bar code.

    n specifies the bar code width as follows:

n	Module width (mm) for Mult-level Bar code	Binary-level Bar Code	
		Thin element width (mm)	Thick element width (mm)
2	0.282	0.282	0.706
3	0.423	0.423	1.129
4	0.564	0.564	1.411
5	0.706	0.706	1.834
6	0.847	0.847	2.258

    ·Multi-level bar codes are as follows:

        UPC-A, UPC-E, JAN13 (EAN13), JAN8 (EAN8), CODE93, CODE128

    ·Binary-level bar codes are as follows:

        CODE39, ITF, CODABAR

[Default]   *n* = 3

[Reference]   **GS k**
